AI Engineer | Real-Time Conversational AI, Agentic Systems, MLOps

SUMMARY

AI engineer who ships LLM agents, RAG and real-time voice AI to production. Founder of **Vendoor**, a UAE B2B platform live with **4 LLM agents** and **397 automated tests**, and builder of HireUp's real-time voice AI interviewer (accuracy **80% to 100%**, latency down **1.5 seconds**).

SKILLS

- **AI / LLM:** LLMs, RAG, multi-agent systems, LangGraph, LangChain, Hugging Face, MCP, prompt engineering, PEFT/LoRA, Transformers, NLP, computer vision (YOLOv8, OpenCV)
- **Real-time:** WebSockets, asyncio, Deepgram STT/TTS, WebRTC VAD, Web Audio API, streaming
- **Engineering:** Python, JavaScript, Node.js, SQL, PyTorch, TensorFlow, FastAPI, Express, Streamlit
- **MLOps:** MLflow, LangSmith, DVC, Docker, GitHub Actions, CI/CD, model deployment, model monitoring
- **Cloud / Data:** AWS (Bedrock, EC2, S3), Microsoft Azure, Google Cloud, PostgreSQL, pgvector, MySQL, Redis, BigQuery

WORK EXPERIENCE

Founder and Full-Stack AI Engineer, Vendoor (vendoor.ae)
Jul 2026 – Present | Abu Dhabi, UAE | B2B procurement and tender platform for the UAE food and beverage market

- Founded, designed and built the platform end to end (product, architecture, backend, front end and deployment). **Live in production** with **6 real UAE suppliers and about 930 products**, with the full tender loop running on real supplier replies.
- Built **4 LLM extraction agents** (tool use, structured output) that turn buyer spreadsheets, PDFs and photos into tender line items, a plain description into a fully sized list, **82-page** supplier catalogues into SKU lists, and supplier replies into draft quotes with page-level evidence.
- Built semantic matching with **Voyage AI embeddings in PostgreSQL + pgvector** ("aubergine" finds "Eggplant") and a pricing engine that converts any reply into a comparable unit price (packs, cases, dozens, g vs kg, fils vs dirhams, VAT).
- Automated supplier outreach on **WhatsApp Cloud API** and **Resend** email. **HMAC-verified webhooks** store every message first and a worker parses it with **atomic claims, so no reply is ever parsed twice**.

Stack: Python, FastAPI, PostgreSQL 16 + pgvector, async SQLAlchemy, Alembic, LLM APIs (tool use, structured output), Voyage AI embeddings, WhatsApp Cloud API, Resend, S3, Docker, GitHub Actions

AI/ML Engineer, HireUp (app.hireup.now)
Jan 2026 – Jun 2026 | Remote (Japan HQ) | Project: Alpha, real-time AI voice interviewer

- Built **Alpha**, a real-time AI voice interviewer, end to end: **FastAPI** backend, **LangGraph** conversation flow, **Deepgram** speech-to-text and text-to-speech, and **WebSockets** streaming to the browser.
- Raised interview navigation accuracy from **80% to 100%** by replacing non-deterministic LLM routing with a deterministic resolver.
- Cut voice-agent latency by **1.5 seconds** with a full-duplex pipeline (asyncio, WebSockets and **WebRTC VAD** for turn detection).

Stack: Python, FastAPI, LangGraph, Deepgram STT/TTS, WebRTC VAD, asyncio, WebSockets, Redis, MLflow, LangSmith, multi-provider LLMs

PROJECTS

Self-Corrective RAG System | LangGraph, AWS Bedrock (Llama 3.1 70B), FastAPI, MLflow, Docker | Live demo

- Built a self-correcting multi-agent pipeline that grades retrieved documents, checks answers for hallucinations and rewrites the query when retrieval is weak, served through a FastAPI service.
- Reached **92% accuracy** and cut hallucinations by **40%** with responses under **1.5 seconds**, with every run tracked in MLflow and shipped as a Docker image.

End-to-End Litter Detection System | YOLOv8, PyTorch, OpenCV, CVAT, DVC, MLflow, Streamlit | Live demo

- Hand-annotated **1,500+ images** in CVAT, trained YOLOv8 detectors and versioned data and models with DVC on DagsHub for fully reproducible runs.
- Improved small-object detection accuracy (mAP) by **15%** across **50+ tracked experiments** and deployed the model as a live Streamlit app.

EDUCATION

Bachelor of Computer Applications (BCA), Yenepoya University, India
Aug 2022 – Nov 2025 | Focus: Machine Learning, AI and Robotics (TCS and Microsoft partnership)

CERTIFICATIONS

Microsoft Azure: AI-900, AZ-900, DP-900 | **IBM Generative AI (Coursera):** Advanced LLM Fine-Tuning, Fine-Tuning Transformers, AI Agents: RAG and LangChain, LLM Architecture and Data Preparation, Language Modeling with Transformers, Foundational Models for NLP, EDA for Machine Learning
